COGITO® Intelligence API

Powerful semantic software

To extract intelligence from data

Cogito Intelligence API brings the power of semantic processing to your application or analysis pipeline, analyzing documents, web pages, tweets and any large data sets to enable Government, Intelligence, Law Enforcement Agencies (LEA) and Corporate Security customers to **access and exploit some of their most strategic sources of information.**

USE COGITO® Intelligence API TO

- **Add semantic features to your systems for knowledge management and OSINT**
- **Analyze big data from COMINT**
- **Enrich your data processing pipeline with social network analysis**
- **Extract and structure info from internal documents**
- **Save time and improve the efficiency of your existing Intelligence & Collaboration platforms**

Through a thorough understanding of meaning and context in the processing of data, Cogito Intelligence API distinguishes between the high volume and various streams of Intelligence information, **resolving ambiguities more effectively than keyword or statistics based solutions.**

Try the power of Cogito Intelligence API today

- **Test the quality of our solution with our interactive Demo**
- **Free proof of concept testing**
- **Annual subscription and volume pricing available**

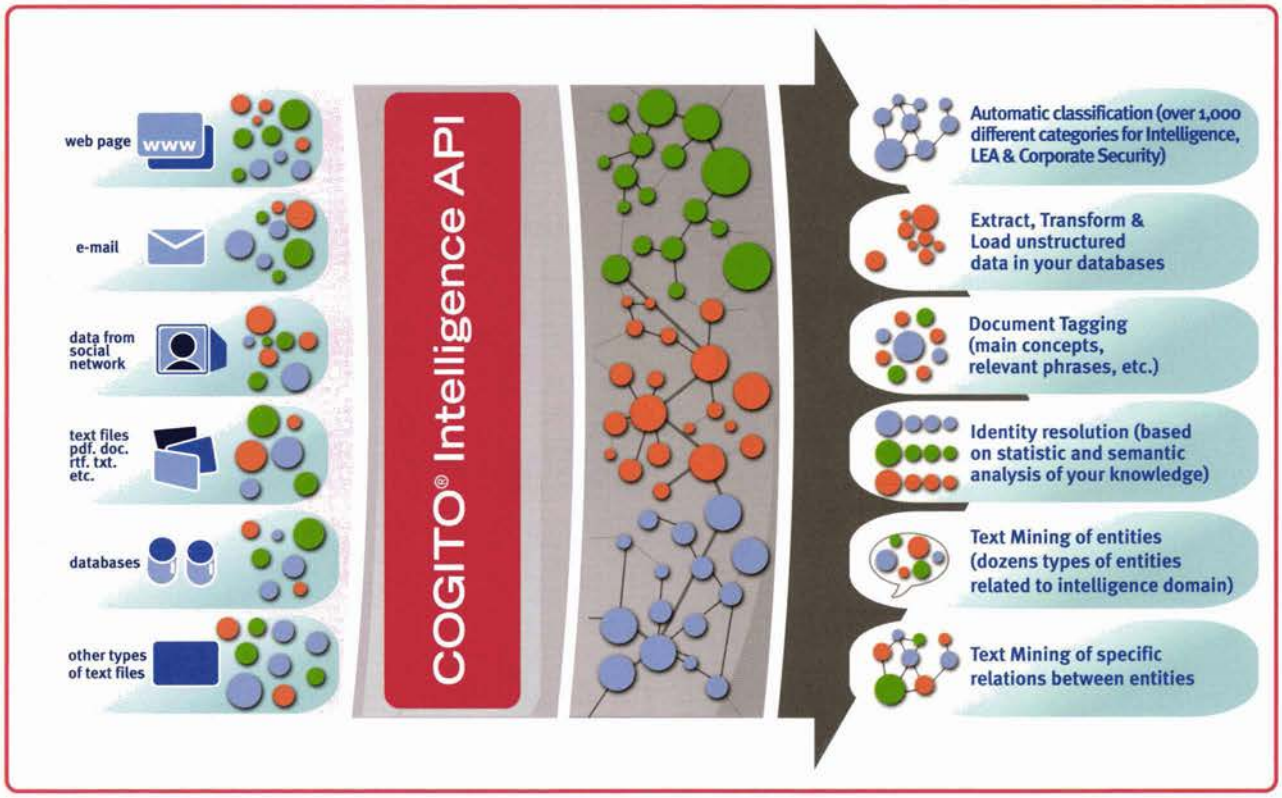
EXPERT SYSTEM
SEMANTIC INTELLIGENCE

COGITO® Intelligence API



Key Features

- Content Categorization with specialized classification for Intelligence, LEA and Geography
- Entity and Relationships Extraction with a focus on the Intelligence domain (world leaders, terrorist organizations, organized crime, unconventional weapons, geographic locations, etc.)
- Name Recognition, Normalization and Identity Matching to support identification

Benefits

Backed by over a decade of intelligence sector experience, Cogito Intelligence API combines best of breed analytics software in a scalable platform that brings efficiency and speed to the process of acquiring, managing and sharing information.

Using advanced semantic processing, text mining, categorization and tagging, Cogito Intelligence API **analyzes content, extracts entities as well as the relationships between entities, and normalizes names** in text to support faster, more accurate evaluation of intelligence data. With Cogito Intelligence API you can:

- Take advantage of the only semantic-based system with a knowledge domain dedicated to crime and intelligence
- Access a regularly updated knowledge base
- Integrate semantic capabilities into your legacy technologies and analysis platforms to enhance their performance
- Build new applications to improve your intelligence solutions for OSINT and COMINT
- Manage large volumes of data with the accuracy and precision

For Partners & System Integrators

- Dedicated support for sales
- Customer specific and on-premise implementations
- Solid SLA and 24/7 customer support
- Free proof of concept testing available
