FINFISHER™
EXCELLENCE IN
IT INVESTIGATION

Technological developments in the world of Internet communication have allowed criminals to create **highly secure, flexible and dynamic platforms** to conduct their **unlawful activities**.

FinFisher helps **government law enforcement and intelligence agencies** to identify, locate and convict such investigative targets and enhances the operational methods to achieve **reliable results**.

The **End-to-End** Approach

Based in Germany with a global support structure, FinFisher combines the most advanced portfolio in the market with dedicated training and after-sales services by experienced specialists.

Intrusion Tools

Innovative cyber tools to target the suspect's devices and extract valuable intelligence:

- » Passwords
- » Files
- » Device information

Remote Monitoring and Deployment Solutions

Easy-to-use turnkey solutions help governmental customers to

- » Track suspects
- » Monitor their online and offline activities
- » Realize other specific requirements

Training and After-Sales Services

- » Practical and operational training
- » Specialist consulting
- » Transfer of know how into governmental operations
- » Ongoing support

FinFisher solutions are sold to governmental agencies only. They target individual suspects and can not be used for mass interception.

Technological evolution

Changes in cyber technologies have led to new ways of communication amongst criminal suspects.

Investigators are increasingly facing technological challenges such as

- » Encryption technologies
- » Password protection
- » Anti virus software and intrusion detection systems
- » High degree of international mobility
- » Use of anonymizing technologies
- » Suspects with intrusion know how
- » Variety of operating systems and devices

Traditional investigation methods are not sufficiently effective to bring operations to a successful closure.

Suspect **communication**

Suspects can be profiled according to their patterns of communication.

Only direct access to the suspect's devices and a strong remote monitoring solution can deliver the intelligence required.

Results

- » Retrieve offline data from target's devices
- » Follow encrypted communication (e-mails, messengers, VoIP calls, social media activities)
- » Identify accomplices related to criminal activities
- » Locate suspects worldwide

"Thank you for providing us with this fantastic tool. It has enabled us to nearly quadruplicate the success rate of our operations and saves us time and personnel to bring an operation to a conclusion."
