

Jingle Tracker & Music Spotting

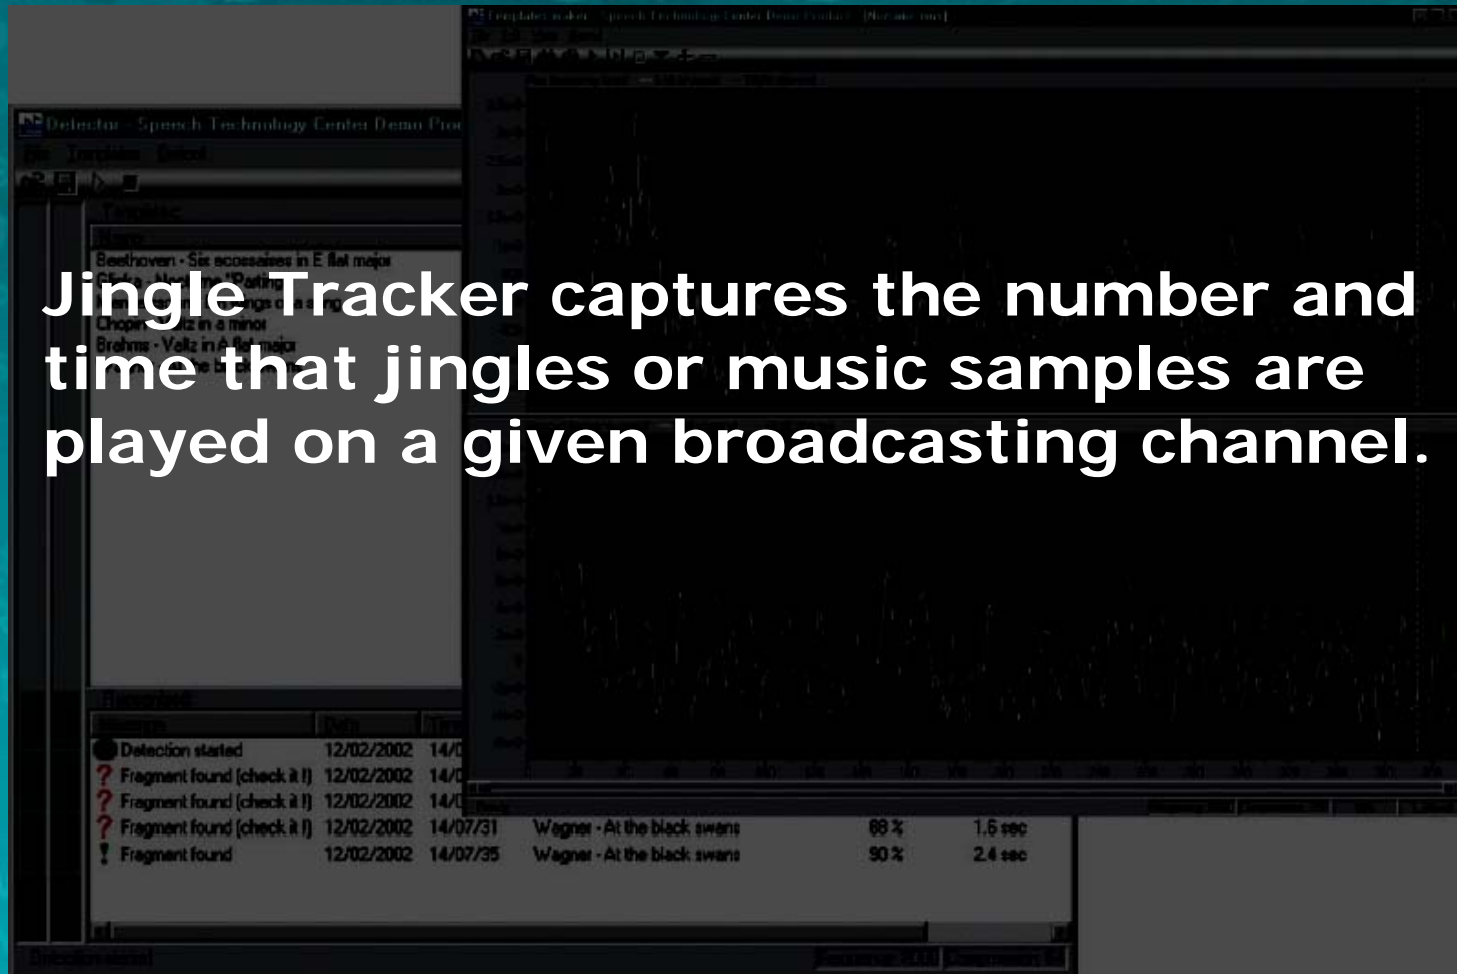

Identifying music in a live sound stream

Jingle Tracker & Music Spotting

● Applications

Jingle Tracker captures the number and time that jingles or music samples are played on a given broadcasting channel.

Jingle Tracker & Music Spotting

● Applications

- **Advertising agencies:** To identify the number of times and when a promotion jingle plays back on a number of broadcasting channels.
- **Broadcasting & Music Copyright organisations:** To check how many times and when music plays back on a number of broadcasting channels.

Jingle Tracker & Music Spotting

● Structure

- **Implementing Music Spotting** assumes two major stages:
- **Creation of a database:** In order to start using music recognition a database of templates has to be created. Here, two options are available:
 - 1) manual -Template Maker software;
 - 2) automatic (available in SDK only)
- **Identification:** The recognition server software logs any occurrence of the data included in the database.

Jingle Tracker & Music Spotting

● Advantages

- **Analysis in real-time provides instant identification in a live broadcast;**
- **Low-resource consumption – runs on standard personal computers (PC);**
- **Adjusting accuracy and performance provides easy adaptation for different tasks**

Jingle Tracker & Music Spotting

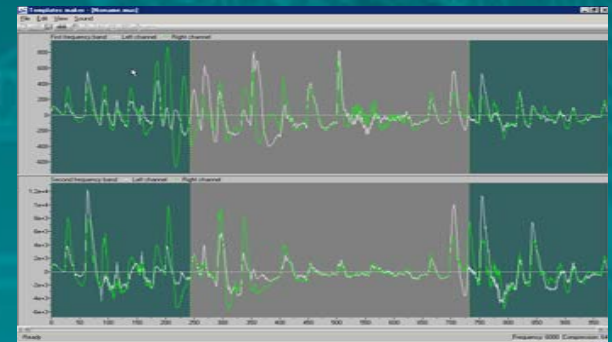

● Template maker

Template Maker is a convenient tool used to create a database of templates from a number of desired musical/advertisement samples

The database should be created before the recognition can be initiated.

The additional information for any record can be specified, such as:

- Template ID, Title, Owner's ID, Publisher's ID, Time, Date, etc.

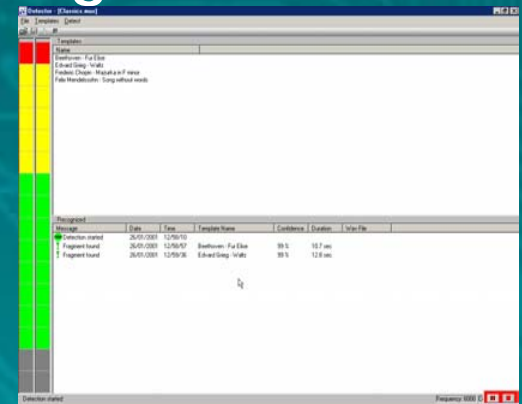

Jingle Tracker

● Recognition server

Recognition server is the core application to analyze live sound stream, recognize musical fragments and to perform reporting.

The software provides successful recognition of about 1,500 x 1 minute templates running on Pentium IV 1.5GHz system

One server application is capable to perform recognition for one channel per single CPU.

| Recognized | Date | Time | Template Name | Confidence | Duration | File Name |
|---------------------|------------|----------|---------------------|------------|----------|-----------|
| Recognition started | 26.05.2007 | 12:50:10 | | | | |
| 1 Fragment found | 26.05.2007 | 12:50:17 | Endless - Full Size | 99.5 | 16.7 sec | |
| 2 Fragment found | 26.05.2007 | 12:50:16 | Edward Long - Vibe | 99.5 | 12.6 sec | |

Music Spotting

● Developer's kit

Music recognition library will allow Windows developers to create sophisticated and customized applications based on STC technology.

Music Spotting SDK features:

- More flexibility in delivering extra features apart from Jingle Tracker application;
- Automatic creation of the templates;
- Analysis by processing a prerecorded stream;

The development version includes demo software.
Flexible licensing policy.
