### Global Distributed Remote Surveillance Platform For Fixed & Mobile Assets

AFIANT Satellite enables government users around the world to remotely monitor incidents from a remote location connected to the internet via Satellite or cellular communications from anywhere in the world.

Simply add a fixed or mobile AFIANT Satellite server with one or more of our supported cameras and remote surveillance can be up and running in a matter of minutes.

#### Benefits:

- Enable users around the world to monitor live fixed or mobile assets including what can be seen from a remote vehicle
- Use a wide range of communications methods including cellular or satellite
- Utilise CCTV cameras or more than 160 different network cameras from 15 leading vendors
- Rapidly deploy your security solution to allow for instant monitoring of events/assets
- Use two way audio to communicate with the remote location
- Bandwidth management can be configured remotely
- View high resolution recorded video remotely even while assets are moving
- Remotely configure, manage and upgrade software remotely via Internet
- Available with support for more than 15 languages

### GOVERNMENT APPLICATIONS

#### Energy

#### Border Control
