

A WORLD OF E-DISCOVERY

Telecommunications Data: Automated Exploration, Search, Analysis & Reporting - A Big Data Exploration Tool.

These days we all carry information detailing every aspect of our lives on our mobile/cell phones. Gaining access to this information during investigations can be key in delivering a break through on a case and securing a conviction.

What is FPA?

The Forensic Phone Analyser software not only efficiently extracts data held on mobile/cell phones but also allows more detailed analysis to identify linked exhibits that detail criminal connections. Its features include:

- The ability to convert/clean data into a common format
- Aggregation of data from many different sources
- The ability to cross reference calls, text and address books
- Allows data to be searched and queried
- Reveals links, associations and relationships within data
- The ability to ignore common and/or legitimate numbers
- Enables statistical analysis of data and automation of result reports

The Benefits?

When investigating criminal activity, time is of the essence. FPA allows the extract of important, and potentially crucial data, to be done in a quick, accurate manner. This is the case whether dealing with one or a thousand phones at a time. It is the ultimate mobile/cell phone forensic tool in the world.
