

Since BEA entered the market in 1993, has earned leadership. Thanks to its combined complete production cycle and service features it won a strong position as a trustworthy and competent partner in intelligence and security area.

BEA is part of the Cross Security Group.

Core Business

- Professional systems for **radio eavesdropping** with TMVWB or digital transmission in fix installations
- Professional systems designed for covered installations on **mobile targets**
- Professional digital **micro-recorders**
- **Analysis, filtering and enhancement** tools for audio signals
- **GPS/GSM tracking systems**
- Mobile phone activity jamming
- Intelligence support systems for criminal investigation and intelligence gathering

All of our solutions are the result of an internal concept and design having as goal:

- reliability
- brand new technologies
- minimal dimensions
- extremely low power consumption
- high performance
- product customisation

“Our *Mission* is to design, manufacture and supply exclusive highly personalised latest generation technological products and services to its interlocutors all of them belonging to Governments, Public Authorities and Police Forces.

Our *Vision* is to be a trustworthy and competent technological partner capable of responding to increasingly specific global demand for security.”

Design

Intense ongoing R&D activity is the backbone of BEA products, which have an average life range of six months to three years.

The Company addresses the current need of innovation with large investment in design-dedicated human resources. 60% of Group employees are highly qualified dedicated technicians. They make up a team engaged in developing state of the art applications from all aspects of telecommunication industry and adapting the latest developments to suit customer's requirements.

Production

BEA faces a complete production cycle: from the first pre-production feasibility, to the prototypes realisation, up to manufacturing and final testing. BEA guarantees products of top quality. The Company is Uni En Iso 9001:2000 certified.

Customization

Customising is a consolidated BEA practice which means offering our Customers the means to modify any existing product or to redesign a new one based on any Customer's needs. The same is true for our service and training applications. This highly flexible and adaptable approach is possible because BEA is versatile and responsible for each step in the innovative design and development and can therefore act achieve the most satisfactory result. Thinking from the Customer's standpoint depends on intuitive listening, understanding the current needs, as well as being aware of critical operational requirements by proposing valid, sustainable, fast and quality solutions.

Distribution

The Marketing Division plays a vital role in Company growth. In a market increasingly demanding innovation, BEA has developed its sales network with the best current marketing skills and will always be in the fore front of the most significant business appointments worldwide.

BEA's development policy is based on its partnership with its distributors in key areas over 5 continents, each of these trading exclusively the most attractive products for each local context and managing Customer relationships with careful after Sales Service. The extensive in-depth training that BEA provides to all its commercial partners with, by transferring all tools needed for End User satisfaction and fidelity, made all this possible.

BEA has 2 major offices: Turin and Milan.

Assistance

BEA's round the clock Call Centre guarantees full technical support by specialised operators, who do not just offer consultancy over the phone, but are also available for visits your site.

BEA's strongest points are a speedy response and the quality of support. This has made the Company a leader in its field, able to guarantee the same response wherever it is present.

Training

Training courses on BEA's products, aspects of security and all various issues involved are today's frontier.

BEA is carrying on these activities, conceived in order to deliver a highly customisable product and service, in an innovative and competent way.
