World-class products from Audiotel International

Our close working relationship with law enforcement and other government agencies has helped us understand the requirements and enabled our design team to develop products that keep you ahead of the criminals and terrorists. Here is a brief description of a few of the products we offer:

Counter-surveillance receivers

As technology advances and eavesdropping devices become more complex, Audiotel International has developed the Scanlock M3 to keep you safe. It is not only able to search and locate signals, but in addition is the only product on the market which can identify the type of signal being transmitted.

Product Scanlock M3.

Non Linear Junction Detectors

Audiotel International offers a range of advanced NLJDs to meet all your protection needs. Suitable for internal or external environments, above or below ground searching and capable of detecting electronic devices even when they are turned off.

Products SuperBroom Advanced, Artemis Advanced and Detect IV.

Fixed and mobile room protection

Room Guard is a detector that is always on guard protecting against all kinds of radio eavesdropping devices – it uniquely highlights the use of Wi-Fi, mobile phone networks, radio signals and Bluetooth transmissions.

This sensor is also available in a mobile portable Meeting Guard variant specifically aimed at office environments.

Products Room Guard and Meeting Guard.

Handheld, local differential RF detector

The Delta V Advanced is a compact handheld differential RF wide-band detector. Measuring the rate of change in field strength enables accurate pinpointing of local RF sources, quickly and efficiently.

The technology protects against real time transmissions from surveillance bugs by detecting and locating their signal, then using audio and visual alerts to guide you to the target. Suitable for people or object searching, whatever the situation.

Product Delta V Advanced.

Audio Surveillance Equipment

Audiotel International offers high quality, evidential audio surveillance equipment suitable for a variety of covert applications. The range includes short and long range transceivers, with the capability to be body worn, quick plant, throw away or host/Trojan. With short and long range antennas being supported by repeaters as well as internet listening capability through a web browser, gives you the flexibility to listen to audio from anywhere in the world. We also offer through the wall listening capability that includes dual Knowles microphone, dual Probe microphones and dual Accelerometers.
