NARCOTIC PROFILING

CLIMS Narcotic profiling module is a Data Bank and Narcotic (Chemical) Laboratory Management module (Optionally Purchased).

EDUCATION

VERISIS has cultivated an approach to training over many years of experience that emphasize knowledge transfer specifically to Forensic laboratory experts. Our background in both science and technology gives us a valuable perspective on what it takes to guide research scientists towards leveraging new tools. The majority of our consultants are former laboratory scientists who have been through this process first hand, thus our approach is tailored based not only on our experience delivering training but also by being on the receiving end of system training in laboratories.
