

Geographic Information System

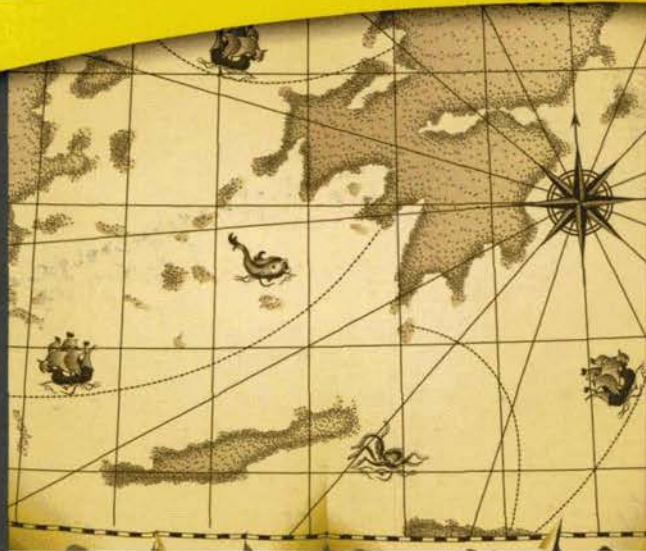

Success Stories

Turkish General Directorate of Forestry:

- Cumberstone Authorization Work Flows
- eGovernment Requirements
- Inaccessible map view / management

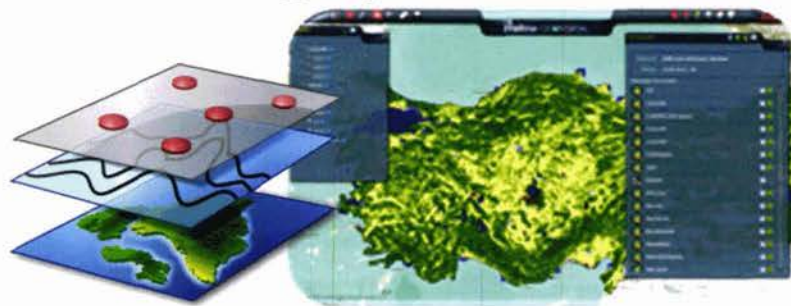

Results:

- Electronic Work Flow Management
- Integrated eGovernment Platform
- Visual Statics
- Map Based Reports

KTP: Katip Çelebi (كاتب چلبی) was an Ottoman scholar. A.S historian and geographer, he is regarded as one of the most productive authors of non-religious scientific literature in the 17th century Ottoman Empire. He drew the future of geographic information systems. Future conditions of resources can be predicted based on current and historical data via KTP as similar Katip Çelebi did. Several years ago.

Proline Geographic Information Systems

Geographic information system (GIS) technology can be used for scientific investigations, resource management, and development planning. For example, a GIS might allow emergency planners to easily calculate emergency response times in the event of a natural disaster, or a GIS might be used to find wetlands that need protection from pollution.

KTP is a platform independent WEB-GIS portal application that provides viewing, sharing and questioning of map-based information from any re-sources such as institution, establishment, and users (local computers or map services that have been published anywhere in the world) and is also combining further data such as job statistics, social media data, spatial data etc.

Most of GIS projects need owner who has developed projects from zero point. While developing these type of applications most of steps are duplicated. But KTP requires less development for any GIS project. Users wherever they are can access data via any web browser from internet or intranet. Other benefits of using KTP are as follows;

- Independent map server
- Dynamic and real time data presentation
- Independent platform
- No duplicated effort during development of tracking programs
- Impact analysis
- Transportation safety and security
- Resource management
- Cost savings resulting from better efficiency
- Better decision making
- Improved communication
