designby

### Nature of Business:

DesignByChip researches, designs, manufactures and supplies innovative criminal surveillance equipment to international law enforcement and government agencies. Using GSM and GPS, DesignByChip develops audio listening devices, tracking hardware and can custom-build a range of surveillance solutions and interface software to tackle the fight against crime.

### Products

In addition to the company's product portfolio, DesignByChip develops custom-built criminal surveillance equipment and software that is developed for specific covert operations, including:

- GSM & GPS tracking and surveillance technology
- Remote GSM audio listening devices
- Remote GPS tracking hardware
- Electronic solutions
- Interface software
- Hardware integration into clothes, bags and electronic goods

### AudioSPY

The AudioSPY is a miniature, self-powered GSM/notification and control device that can be used on any GSM network... anywhere. Working on three frequencies: GSM 900 MHz; GSM 1800 MHz and GSM 1900 MHz, AudioSPY enables remote audio surveillance of any location. Once deployed, conversations can be monitored using a cell phone or landline telephone negating the need to remain geographically close to the source.

### Microtrack

Microtrack is a miniature, battery-powered, rapid deployment positional and audio gathering surveillance tool. Using the latest innovations in GPS global positioning and GSM communications, it is a cutting edge tracking/GPS logging system. A market leader; Microtrack gives users a competitive edge by allowing them to track dynamic targets in covert and high-profile operations.

Every surveillance operation is different and we build our kit to reflect this. Our dedicated R&D team enables us to develop custom-built surveillance devices and software that really get the job done. Using GSM and GPS technology, DesignbyChip has the innovative and technological expertise to develop products to fit any surveillance scenario, from advanced remote audio surveillance, to criminal positioning systems. Tell us and we'll develop it.
