# AudioDisk™ Internet Monitoring®

A comprehensive Internet Monitoring solution fully compatible with AudioDisk™

AudioDisk™ is the world leader in communication monitoring systems. With over 600 installations in 60 countries, AudioDisk™ is able to provide solutions for P.S.T.N., I.S.D.N., G.S.M., Cellular and International Communications with full voice, fax, modem and internet recording and demodulation capabilities.

The I.M.S. solution provides a comprehensive suite of solutions that address the wide threat of Internet and E-mail activity.

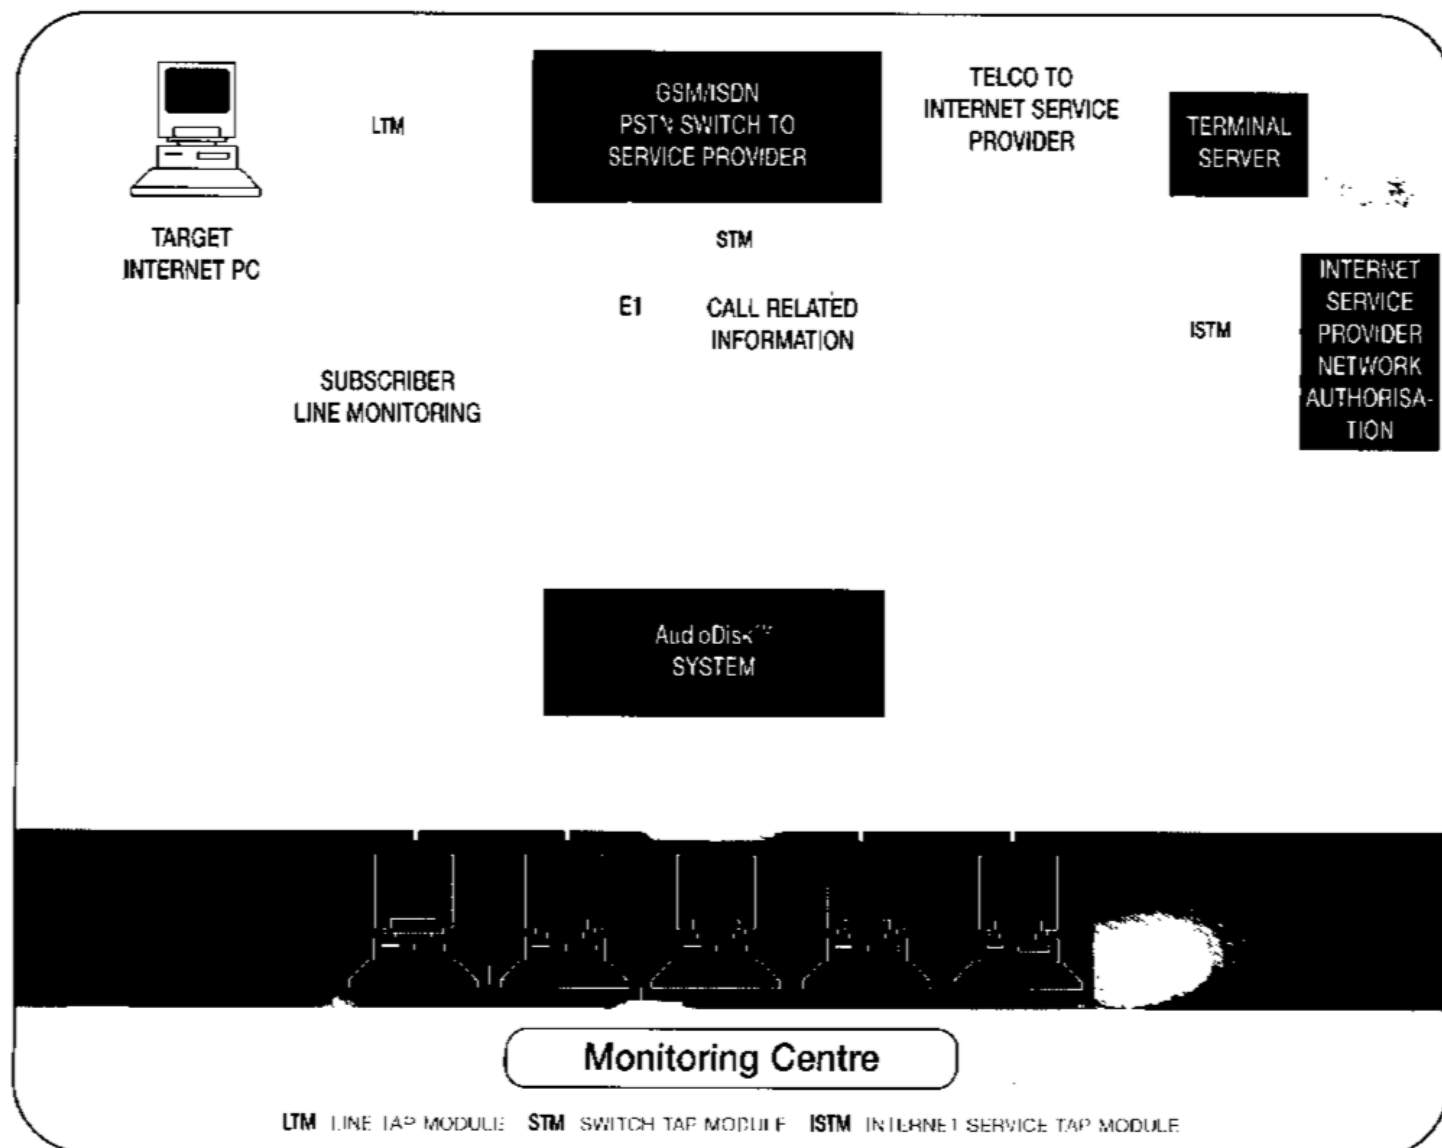

The I.M.S. can operate as a stand-alone device or be fully integrated into an AudioDisk™.

Full Session Analysis includes the following basic capabilities:

- Web browsing demodulation
- E-mail demodulation (including all relevant attachments)
- "Key-site" alarm system
- Full print/forward and Auto-sharing facilities.

The I.M.S. is split into two logical entities:-

- Network access sub system.  
These device(s) are responsible for monitoring the target's activity and can be placed at all or any of the following positions: subscriber line, telco network service provider and/or internet service provider.
- Call Content Demodulation.  
These devices are responsible for converting the content of the target's activity into images and text as seen by the target.

Information correct as of March 1999
